

## Apple Trial Data

A trial in pink lady apples was conducted in Shepparton, Victoria. The graphs below show the difference in water use between trees treated with Screen and untreated trees. The higher soil moisture content in the Screen-treated trees is due to lower water use. Yield data are also presented below.

	<b>Yield Kgs/Tree</b>	<b>Apples/Tree</b>	<b>grams/apple</b>
<b>Untreated</b>	24.6	173.6	142.5
<b>Screen</b>	28.6	162.2	176.3
